Summary:

Frontend Developer with 3+ years of experience building interactive, high-performance web dashboards using React.js, TypeScript, and modern JavaScript (ES6+). Experienced in data visualization with ECharts, D3.js and in developing cloud observability and FinOps dashboards, including service maps, metrics, logs, alerts, and AI-driven cost optimization insights. Skilled in creating modular, responsive, and scalable frontend architectures, integrating real-time data via APIs, and optimizing performance, accessibility, and user experience. Collaborative team player with a strong record of delivering intuitive dashboards that enable actionable insights and operational efficiency.

Education:

- **B. Tech in Electrical and Electronics Engineering**
- Gudlavalleru Engineering College, Gudlavalleru, Andhra Pradesh July 2018 - August 2021

Skills:

- **Languages & Frameworks:** TypeScript, JavaScript (ES6+), React.js, HTML5, CSS3, SCSS
- **UI Libraries & Design:** Tailwind CSS, Mantine UI, Material UI, Responsive Design, Accessibility (WCAG)
- **Data Visualization & Dashboards:** D3.js, ECharts, Chart.js, Service Maps, Metrics, Logs, Alerts, FinOps Dashboards
- **Cloud Platforms & FinOps Tools:** AWS (S3, CloudFront, Lambda), Azure, GCP, AI FinOps, Cost Allocation, Chargeback/Showback, Cloud Cost Optimization
- **Data & Integration:** REST APIs, WebSockets, Secure API Integration
- **Performance & Quality:** Code Splitting, Lazy Loading, Lighthouse Audits, Jest
- **DevOps & CI/CD Tools:** Git, GitHub Actions, Docker, AWS CodePipeline, Jenkins, CI/CD
- **Methodologies & Collaboration:** Agile / Scrum.

Professional Experience:

EverestDX, Hyderabad

Front End Developer / UI Developer

Oct 2022 - Present

- Worked on building cloud cost (FinOps) dashboards using React, TypeScript, and modern JavaScript, helping teams understand cloud spend, usage trends, and cost anomalies across multiple cloud platforms.
- Developed cloud observability dashboards that showed metrics, logs, alerts, and service maps, giving users a clear picture of system health and service dependencies.
- Designed and implemented service maps to visually show how services interact, making it easier for teams to identify bottlenecks and trace issues to their root cause.
- Built custom visualizations with D3.js to display time-based data, cost breakdowns, and utilization patterns in a clear and interactive way.
- Used ECharts and Chart.js to create fast, responsive charts that handled large volumes of data without impacting user experience.
- Integrated real-time updates through WebSockets and secure REST APIs, so dashboards always reflected the latest metrics and cost changes.
- Used TypeScript with strict typing and generics to keep data models consistent, reduce runtime issues, and make the code easier to maintain.
- Helped shape a modular, micro-frontend-based UI structure, allowing features to be developed, deployed, and scaled independently.

- Integrated AI-driven self-healing and cost-optimization features into the UI, giving users visibility into automated actions and predictive recommendations.
- Worked closely with FinOps, Data Science, backend, and cloud teams to bring cost forecasting, anomaly detection, and optimization insights into the dashboards.
- Built responsive and accessible UI components using Tailwind CSS and Mantine UI, ensuring the applications worked well across devices and browsers.
- Focused on frontend performance, using lazy loading, code splitting, and Lighthouse audits to improve load times on data-heavy screens.
- Supported CI/CD pipelines with Git, GitHub Actions, Docker, and AWS CodePipeline, helping ensure smooth and reliable deployments.
- Took part in code reviews, testing with Jest, and Agile team discussions, contributing to clean code, stable releases, and shared team standards.

Certificates:

- Finops Certified
- Azure Fundamentals Certified
- Team Spirit Awardee – Jun 2024
